MILESTONE 2: Core Functionalities Development

Activity 2.1: Develop the Core Functionalities

1. Legal Document Generation: Generate legal documents such as contracts and agreements based on document type, parties, terms, and dates.

2. Document Output Formatting: Convert raw AI-generated text into structured .docx, .pdf, and .txt files with legal formatting, logos, tables, and footers.

- format_docx(text, doc_type)
- format_pdf(text, doc_type)
- format_html_preview(text)

Formatting uses python-docx for Microsoft Word formatting, FPDF for branded PDF documents, and HTML Preview with Streamlit styling.

3. User Interaction & Recommendations: Accept user preferences through the Streamlit interface and reflect them in AI-generated legal content.

4. Editable Document & Download: Provide an editable text area and downloads in .txt, .docx, and .pdf formats.

Activity 2.2: Implement the FastAPI Backend

1. Define Routes in FastAPI (Instead of Flask).

2. Process User Input: Handled via Pydantic & Streamlit Forms.

3. Integrate Groq (Gemini) API Calls.
