MILESTONE 3: API Logic Integration

Milestone 3 focuses on designing and integrating the backend API logic that powers document generation using the Gemini 1.5 Pro model. It provides the bridge between frontend inputs and AI-powered document generation.

Activity 3.1: Create and Configure main.py

This step initializes the FastAPI application, sets up the base endpoint for health-checks, and includes modular API routes.

- Initialize the FastAPI app.
- Define a root (/) endpoint to verify the service is running.
- Include routes from the routes.py module.

Activity 3.2: Handle Document Generation Logic in routes.py

This task handles user inputs from the frontend and sends them to the Gemini model for document generation.

- Define a Pydantic DocumentRequest model to validate incoming data.
- Initialize the GeminiDocumentGenerator from ai_core.gemini_generator.
- Create a POST endpoint (/generate) to accept user input and return generated legal content.
