MILESTONE 4: Frontend Development – LegalEase

Milestone 4 focuses on creating a responsive and user-centric web interface using Streamlit. It enables users to input legal details, generate AI-powered documents, preview results, edit them, and download documents in TXT, DOCX, and PDF formats.

Activity 4.1: Designing and Developing the User Interface

Step 1: Streamlit Page Configuration and Layout Setup — configured the Streamlit app with a three-column layout to center-align the company logo.

Step 2: Header and Title — displayed a subtle center-aligned title under the logo.

Step 3: User Input Interface — created inputs for document_type, parties, terms, and dates.

Activity 4.2: Creating Dynamic Previews and Export Options

Step 1: Generate Document with Backend AI — clicking Generate Document sends a POST request to the FastAPI backend; AI-generated content is sanitized and displayed dynamically.

Step 2: HTML Preview Rendering — output is previewed in a dark-themed scrollable card with semantic HTML.

Step 3: Editable Document Preview — users can click Edit Document and modify generated content using a text area.

Step 4: Multi-Format Download Options

- .txt (Plain Text)
- .docx (Formatted Word Document with logo, headings, and table)
- .pdf (Branded PDF with logo and footer)
