MILESTONE 5: Deployment

Milestone 5 focuses on deploying the LegalEase application locally using FastAPI as the backend and Streamlit as the frontend. It covers virtual environment setup, dependencies, and verification of modules including Gemini API integration, document generation, and downloads.

Activity 5.1: Preparing the Application for Local Deployment

Step 1: Set Up a Virtual Environment — create and activate a virtual environment for isolation and consistent dependency management.

Step 2: Install Dependencies — ensure backend and frontend dependencies are installed from requirements.txt using pip install -r requirements.txt.

Step 3: Configure Environment Variables — create a .env file to securely store the Gemini API key.

Activity 5.2: Testing and Verifying Local Deployment

Step 1: Launch the FastAPI Backend using Uvicorn.

Step 2: Launch the Streamlit Frontend by running app.py.

Step 3: Test All Functionalities: input document type, parties, terms, and date; generate legal content; preview in dark mode HTML; edit text; download .txt, .docx, and .pdf.

Check for proper layout with logo and footer, clean formatting of bullet points, and correct embedding of terms in the document.
